

Training courses

Master's degree in electronics and electrical and automatic energy: electrical engineering and industrial IT curriculum (GEII)

The objective of the EEEA Master's degree is to train students with advanced scientific knowledge, able to master and develop electronic, electrotechnical and automatic systems as well as applications requiring industrial IT, so that they are capable of commanding and controlling industrial systems or applications.

Graduates of the GEII curriculum will also have sound knowledge of high-voltage pulses and high pulsed power (HPP). The scientific competencies acquired in these domains represent a unique area of expertise in France.
